

How can Biomass Futures results assist the bioenergy policy agenda?

Biomass Futures Final policy workshop, 20 March 2012, European Parliament, Brussels

Calliope Panoutsou, Imperial College London

Outline

- State of play when Biomass Futures started
- Policy today
- Outputs
- Relevance to Supply policies
- Relevance to Demand policies
- Relevance to MS policies

State of play when Biomass Futures started

Dec 08

- RES-D and the Climate Package were agreed between Parliament and Council.
- Biomass expected to be the major contributor

June 09

Oct 10

 NREAP template with detailed requests for biomass potentials & use in MS

BEE, CEUBIOM, EUWOOD, BioBench

• 25 NREAPs submitted

BF work benchmarked with NREAPs info

BF start date

I@MASS FUTURES

Imperial College London

BEE & CEUBIOM

CEUBIOM - Classification of European Biomass Potential for Bioenergy Using Terrestrial and Earth Observation

www.ceubiom.org

Contacts: Manuela Hirschmugl, Joanneum Research, manuela.hirschmugl@joanneum.at

Peter Gyuris, Geonardo, coordinator@ceubiom.org

BEE - Biomass Energy Europe

www.eu-bee.com

Contacts: Matthias Dees, University of Freiburg, <u>matthias.dees@felis.uni-freiburg.de</u>
Barbara Koch, University of Freiburg, <u>barbara.koch@felis.uni-freiburg.de</u>

- Both projects objective:
 - Contribution to the harmonisation of the assessment of the potential of biomass for energy in EUROPE (focus on methodologies)
- Close collaboration between Biomass Futures, BEE &
 CEUBIOM
- A joint publication of major project results is in preparation

Project Outputs

- Market segment analysis: H, El/CHP and T markets (EU27 and UK, DE, NL, AT, EL
- Spatially explicit <u>sustainable biomass cost supply patterns incl.</u> <u>imports</u> (EU27 and MS)
- Assess <u>biomass role</u> (MS level) in the heat, electricity- CHP and transport sectors, in the framework of the RES-D <u>compared to</u> <u>NREAPs</u>, using;
 - Different demand scenarios, timeframes (2020- 2030) and sustainability constraints.
- Improved comprehension & development of criteria for indirect land use change, water, air and soil quality as well as social issues, and their impacts on biomass availability and costs.
- <u>Continuous stakeholders consultations</u> to ensure the market perspective in relation to biomass demand and supply;
- Involve policy stakeholders to discuss concerns and key on-going issues as well as ensure information transfer throughout the project

NTELLIGENT |

Biomass Supply

Spatially explicit sustainable biomass cost supply at NUTS2 for 2020 & 2030

- CAP Pillar 1 (agricultura) support)
- CAP Pillar 2 (Rural Development Policy)

Forestry Action Plan

• Waste Framework

Directive

Which is the cropped biomass potential (species, yields, costs, land use maps)?

Which is the amount of forest & waste biomass that can be sustainably used for H, El/ CHP & Tr for 2020 & 2030 (MS disaggregation)

Imperial College London

Policy issues relevant to Supply

- Target resource efficiency
- Residual/ waste feedstock types: supply will remain a regional issue which requires regulatory, analytical & practical implementation frameworks
- Cropped biomass: perennials can be grown on lower quality land, reduced iLUC, they could actually help "remove" the seasonality burden in a region; Plus they can add value to local economies- they could be a more sustainable option to imported biomass.
- Policies should deliver clear messages regarding to the categorisation & prioritisation of land (accounting among other issues for biodiversity & ecosystem services).

Biomass Futures: Relevance to Demand policies

Market analysis involving stakeholder consultations

Domestic & imported biomass share in RE- H, RE- E & RE-T

Costs (direct and in comparison with fossil competitor)

Comparison with demand in NREAPs

Biomass Demand

Addressing conflict among sectors

Most promising technology & fuel options

3 scenarios/ 2020 & 2030

overarching:

Roadmap to a Resource Efficient Europe

for energy:

- Renewable Energy Directive
- Fuel Quality Directive
- Proposal Energy Efficiency Directive
- Emissions Trading Scheme

for materials:

 Bioeconomy Strategy and Action Plan

Cofiring shares with MS disaggregation

Policy issues relevant to Demand

- More stimulation towards the most efficient & cost effective pathways.
- Match the industrial demand to attract investment in Europe & create/ maintain markets
- Policy alongside market driven measures
- Demand for biomass is now driven by sectoral demands, this is not always a sustainable starting point; in future policy formation it should be driven by most efficient scale- technology combinations.

Focus on sectoral policy & regulatory frameworks

Benchmark with MS that have relevant policy experience in the relevant market segments & sustainable supply.

Relevance to MS policies

Validate national sustainable supply data for NREAPs

Prioritise indigenous biomass value chains for energy & fuels
